Docket No. 520.43596X00

Serial No.10/791,823

Office Action dated January 25, 2007**AMENDMENTS TO THE CLAIMS**

The following listing of claims replaces all prior listings, and all prior versions, of claims in the application.

LISTING OF CLAIMS:

1. (Previously Presented) A liquid cooling system for use in an electronic apparatus including a heat-generating element therein, comprising:
 - a pump for supplying a cooling liquid;
 - a heat-receiving jacket, being supplied with said cooling liquid, for receiving heat from the heat-generating element;
 - a radiator, being supplied with said cooling liquid passing through said heat-receiving jacket, for radiating heat therefrom;
 - flow passages for circulating said cooling liquid in a route passing through said radiator back to said pump, said flow passages including parts that generate corrosive ions therefrom; and
 - a tank for accumulating said cooling liquid circulating within said flow passages, wherein:
 - the cooling liquid contained within said system is less than or equal to one liter in volume,
 - an ion exchange bag, having water-permeable surfaces, encloses an ion exchange resin therein, and is disposed in the cooling liquid accumulated within said tank, and
 - said ion exchange bag enables ion exchange through diffusion on almost all water-permeable surfaces thereof.

Docket No. 520.43596X00
Serial No.10/791,823
Office Action dated January 25, 2007

2. (Previously Presented) The liquid cooling system, as described in the claim 1, wherein:

the ion exchange bag, having the water-permeable bag enclosing the ion exchange resin therein, is held within a container.

3. (Previously Presented) The liquid cooling system, as described in the claim 1, wherein:

said ion exchange bag is disposed within an inside or a downstream of said radiator, and also in one of parts building up the liquid cooling system in an upstream of said heat-receiving jacket.

4. (Previously Presented) The liquid cooling system, as described in the claim 2, wherein:

said ion exchange bag is disposed within an inside or a downstream of said radiator, and also in one of parts building up the liquid cooling system in an upstream of said heat-receiving jacket.

5. (Previously Presented) An electronic apparatus, comprising:

a heat-generation element mounted on a substrate;

a heat-receiving jacket, being thermally connected to said heat-generation element;

a heat radiation jacket for radiating heat of a heated liquid supplied from said heat-receiving jacket;

a pump for circulating the liquid to those jackets; and

a piping for connecting said pump and said both jackets, wherein:

Docket No. 520.43596X00
Serial No. 10/791,823
Office Action dated January 25, 2007

the cooling liquid contained within said electronic apparatus system is less than or equal to one liter in volume,

an ion exchange bag, having a water-permeable bag enclosing ion exchange resin therein, is disposed in said piping, and

said ion exchange bag enables ion exchange through diffusion on water-permeable surfaces thereof.

6. (Previously Presented) The liquid cooling system of claim 1, wherein said ion exchange bag is in the form of an exchange holder.

7. (Previously Presented) The liquid cooling system of claim 6, wherein said ion exchange holder is held within a container.

8. (Previously Presented) The liquid cooling system of claim 6, wherein said ion exchange holder is disposed within an inside or a downstream of said radiator, and also in one of parts building up the liquid cooling system in an upstream of said heat-receiving jacket.
